Course Description

This course introduces the technologies and field procedures used in surveying and mapping. Topics: fundamental principles of plane surveying and skills to undertake all the measurements and computations necessary for mapping small areas. There are several outdoor practical assignments that combine to produce a detail and contour plan of an area of interest. The course also covers the theory and practice of surveying on a plane, including the associated computations; leveling, traversing, detail and contour observations with automated instruments, plan preparation and incorporation of field surveys into geographic information systems; and introduction to advanced measurement techniques including 3d laser scanning and GPS.
