UCEAP Course Number 33
UCEAP Course Suffix
UCEAP Official Title DARWIN AND EVOLUTION
UCEAP Transcript Title DARWIN & EVOLUTION
UCEAP Quarter Units 6.00
UCEAP Semester Units 4.00

Course Description

What most people think they know about Darwin, his life and his famous book ‘On the origin of species’ is wrong. This course provides a solid background for understanding how the theory of evolution unfolded. It covers the history of geology, paleontology and biology from the 1700s to the 20th century. The central focus is on the life and work of Charles Darwin and how biological evolution was uncovered, debated and accepted by the international scientific community in the 19th century, and beyond.
