Course Description

The Digital Technology and Work course provides students with an overview of how digital technology is reshaping work and organizations, with a focus on the United Kingdom. The course looks at the role of technology at work over time, drawing out case studies on digital technologies in relation to work, entrepreneurship, and the economy. In addition to this, it examines the broader social and economic changes that technology is creating. Topics covered include: the role of technology at work over time, digitalization and its impacts, artificial intelligence at work, the platform and the gig economy, social media and influencing, and the future of work. The course will develop students' understanding of technology and work, providing a range of examples and case studies that can be used in other contexts. Throughout the course, the students are introduced to different critical approaches to understanding digital technology that can be applied elsewhere.
