CLIMATE CH&INTL SEC

UCEAP Quarter Units
4.50

UCEAP Semester Units

3.00

Course Description

This course investigates how states and international actors have responded to new security challenges in response to the speed and scale of climate change, and how their different understandings of the climate-security nexus might shape global responses to climate change. It relies on an innovative theoretical approach spanning traditional security, human security, and existential security that helps to capture the complex dynamics of emerging approaches to dealing with security in the Anthropocene. By comparing how different framings of climate security impact various policy sectors, the course assesses the barriers and opportunities for addressing global climate security.
