**Course Description**
This course addresses the role that psychological research can play in understanding and supporting family relationships and educational processes. Topics include theoretical approaches to the study of the family (e.g., family systems theory, life-course approaches, socialization) as well as theoretical perspectives concerning children's learning (e.g., cognitive development, sociomotivational factors). The course emphasizes recent empirical work on the consequences of family functioning for children's development and the specific aspects of children's academic development and socioemotional well-being in schools (e.g., key curriculum areas such as reading and mathematics, special educational needs, mental health, and social and emotional learning).

**Language(s) of Instruction**
English

**Host Institution Course Number**
C8818
