Course Description

This course offers an introduction to the design of medical instrumentation. Topics include: signal amplification; signal filtering; electrical safety; electrocardiology; electroencephalography; other biopotential recordings--EMG, ENG, ERG, EOG; biopotential amplifiers; electrodes and electrolytes; sensors-- biophysics, design, applications; introduction to signal digitalization; therapeutic and prosthetic devices; pressure and sound measurements; flow and volume measurements; introduction to optical measurement systems.

Prerequisites: Introduction to Bioengineering, Electronic Technology in Biomedicine, Measuring Instrumentation, Signals and Systems, or Digital Signal Processing.

Language(s) of Instruction
