**UCEAP Semester Units**

5.70

## Course Description

This class covers the evolution of all plant groups from the early prokaryotic algae to the Angiosperms. This class consists of a lecture, seminar, and lab. In the lecture the professor explains broad trends about each class of organisms and tendencies in the evolution process. In the seminar students work on literature reviews and presenting research. The lab period provides students with the opportunity to work in more detail on the topics covered in the lecture.

## Language(s) of Instruction

German
