Course Description

This is a graduate level course that is part of the Laurea Magistrale program. The course is intended for advanced level students only. Enrollment is by consent of the instructor. The course focuses on the basic constructs of general psychology and the main methods in the study of human behavior. The course discusses on the basic skills necessary in analyzing cognitive and emotional processes. The course includes an experimental part linked to a laboratory that focuses on emotion and perception. Specific topics include: research methods in psychology; classical psychological experiments; sleep and consciousness; application of statistical method, Functional Linear Modeling, to the analysis of actigraphy data; personality; individual differences. Students participate actively in class discussions and carry out group work on specific topics.
