Course Description

The course deepens students' understanding of inference about of sample means and linear correlation and extend these techniques to more complex analysis (with multiple different groups, multiple manipulations, or multiple types of measurement). Much of what students do is based around introducing the most common form of inferential statistical analysis (Analysis of Variance) and related techniques. This course introduces the theory and develop practical knowledge of how to do all these types of analysis, which will form the basis of the course assessment.
