## Course Description

The subjects are designed to help students understand cognitive development in infancy and early childhood, and to understand main cognitive development theories and research methods. Through lectures, class discussions, field collection of cognitive development materials, and reading of designated textbooks and journal papers, students can not only understand the process of cognitive development in infants and young children, but also cultivate students to apply what they have learned in class and observe in-depth research on the cognitive process of infants and young children. The course focuses on: Discussing the main theories of cognitive development, such as Piaget's school, information processing theory, and Vygotsky's and other scholars' interpretations of early childhood cognitive development, and commenting on the above theoretical orientations; exploring the main cognitive areas of infancy, such as perception; the development of concepts, language, reasoning, and memory, including social cognition, and a discussion of the physiological basis of cognitive development.
