Course Description

The purpose of this course is applying social and behavioral principles and theories on the phenomenon regarding health, disease, and environment. In academia, health behavior sciences and medical social sciences are often seen as a whole. However, in the recent decades, personal health is drew more attention in the aspects of diseases contract and population health, which makes the term “behavior” favorable and brings enthusiastic discussions and debates. As far as the depth and breadth within health domain, every issue is associated with behavior. Due to the complexity, we need to explore and examine health outcomes through different angles and approaches in order to comprehend the essential and determinants of health issues to further achieve effective solutions. This course contains two sections. First, we review the elements of human behavior through social sciences or even biological sciences (e.g., sociobiology). Second, with the understanding of behavioral basis, we move on to episodes which are related to behavioral, structural, and policy fields as well as the causes and consequences in the contemporary public health to develop proper interventions. Within the structure and thread of the theoretical concepts, the course is expected to acquaint students with the history and progress of human behavior and the fundamental framework utilized to describe human behavior.
