**Course Description**

Accounting is the process of identifying, recording, and reporting economic activities and serves a vital role in our economy. It is a language that presents the financial condition of a business, non-business or other entity as well as how an entity performed financially in a given period. There are many people who rely on accounting information for their decision making, including investors, creditors, regulators as well as executives and managers who run businesses.

This course presents a fundamental framework and concept for financial accounting, which is used by for-profit business enterprises mainly in their external reporting. In any business, financial accounting is imperative; it is simply impossible to understand a business without understanding accounting. The objectives of this course are to 1) Understand the basic concept of financial accounting; (2) How it is processed, and (3) How it is used.

There are no prerequisites for this course. An accounting background or any specialized knowledge is not required.
