UCEAP Transcript Title
FEELING OF BEING

UCEAP Quarter Units
8.00

UCEAP Semester Units
5.30

Course Description

This course introduces the main theoretical models and the empirical methods employed to explain and measure consciousness. It covers the neurobiological mechanisms possibly underlying the emergence of consciousness and why science needs to embrace conceptual and philosophical levels of analysis. The course outlines the multi-faceted nature of consciousness by discussing various aspects of the phenomenon in normal as well as in abnormal conditions. It encourages active discussions and critical thinking regarding the current state of knowledge about how the brain relates to the mind. Assessment is based on an individual or group paper of 12-18 pages.

Language(s) of Instruction
English
