5.00

**UCEAP Semester Units**

3.30

## Course Description

The course is taught jointly by the School of Natural Sciences and the School of Psychology, and begins with a brief history of behavioral research. Students are introduced to various aspects of learning, cultural transmission, cognition, play, and intelligence in animals, including humans. They explore the animal's behavior in its environment and why all individuals of a species do not behave in the same way. The course addresses the importance of an understanding of behavior in relation to conservation in the wild and in zoos, and in relation to climate change.

## Language(s) of Instruction

English
