Course Description
This course provides an introduction to management and financial accounting, and the types of information each provides. Students examine basic financial issues faced by managers in business organizations and use accounting data in order to assist managerial decisions and interpret financial performance and position of organizations through an understanding of the accounting concepts and procedures used in preparing financial statements. Topics covered includes limited companies and their financing, reporting financial position: the Balance Sheet, reporting operating performance: the profit and loss account, cash flow statement, accounting treatment of fixed assets, interpretation of financial statements, introduction to management accounting and cost classification, marginal costing and break-even analysis, overheads and absorption costing, and various techniques in investment decision appraisals.
