UCEAP Course Suffix
UCEAP Official Title AN INTRODUCTION TO APPLIED ECONOMIC ANALYSIS
UCEAP Transcript Title APPLIED ECON ANALYS
UCEAP Quarter Units 6.00
UCEAP Semester Units 4.00

Course Description
This is a course for non-economists. It explores topics of general interests through the lens of an economist. It is an introduction to the way economists think and analyze problems. Topics range from comparative advantage in international trade and exchange rate determination in international finance to income disparities between rich and poor countries, health and education, and the environment. The course familiarizes non-economists with simple ideas around the notion of scarcity and opportunity cost, and helps students understand how economists view trade in an increasingly globalized world economy, financial crises, economic growth in poor and emerging market economies, income distribution, impact evaluations on investments in health and education, and externalities.
