UCEAP Course Number 121
UCEAP Course Suffix
UCEAP Official Title LABOR ECONOMICS
UCEAP Transcript Title LABOR ECONOMICS
UCEAP Quarter Units 6.00
UCEAP Semester Units 4.00

Course Description

The course analyzes how the labor market works, how agents in this special market behave, and how governments regulate and set up institutions to govern the labor market. Whether and how much to work, how much to invest in human capital (skills), unionization, and whether and where to migrate are all examples of decisions on the supply side of the labor market. The combination of labor (or different types of labor) and other factors in production, and job creation and job destruction are examples of decisions on the demand side of the labor market. Minimum wages, unemployment insurance, employment protection legislation, and collective bargaining, are examples of institutions governing the labor market. The course covers the following topics: labor supply and demand; labor market equilibrium; human capital, education, and training; compensating wage differentials; immigration; and automation and the future of work.
