UCEAP Semester Units

3.00

Course Description

The course studies the political, economic, and social issues surrounding the development of water systems and regulation. The course focuses on France and examines ways that humans have transformed waterways to make them more useful. The course discusses the two sides of sustainable development by studying a human demographic approach and an earth approach that looks at the transformations taking place on earth, such as global warming. The course also examines the limits of water usage for industrial and agricultural activities and water as a tool that transforms territories.
