Course Description

This course provides an analysis of portfolio selection, corporate decision making and asset pricing. It also provides the tools and advice needed to understand corporate finance principles and strategies and information on the risks and rewards associated with corporate finance and lending. The lectures develop the central concepts of modern finance: net present value, efficient markets and the trade-off between risk and return, and use them to explain corporate finance with a balance of theory and application. It emphasizes the modern fundamentals of the theory of corporate finance, while providing contemporary examples to make the theory come to life, such as determining an operating budget and calculating future cash flows. The course also covers behavioral corporate finance, which identifies the key psychological obstacles to value maximizing behavior, along with steps that managers can take to mitigate the effects of these obstacles.
