## **UCEAP Transcript Title**

PERCEPTN/COG: COLOR

### **UCEAP Quarter Units**

8.00

### **UCEAP Semester Units**

5.30

# **Course Description**

This course explores many ways in which humans and other species perceive and think about color. Color will serve as a sandbox to study how different psychological domains are inextricably linked and influence each other. Color is perfect for this - on one hand, a uniquely visual phenomenon that arises from computations performed by sensory neurons, while on the other hand, a conceptual and cognitive domain high in social and emotional salience and influenced by language-derived concepts.

## Language(s) of Instruction

English

### **Host Institution Course Number**

PSYL10166
