UCEAP Course Suffix**UCEAP Official Title**

INTRODUCTION TO GENETICS

UCEAP Transcript Title

INTRO GENETICS

UCEAP Quarter Units

6.00

UCEAP Semester Units

4.00

Course Description

This course presents modern genetics in a specifically non-molecular context in the hope that students see that molecular biology has the potential to answer larger and more important questions rather than being simply an end in itself. Students are introduced to the genetics of a variety of creatures from peas to humans. Topics include basic Mendelism, genetic linkage and linkage maps, chromosomes, cytoplasmic inheritance, mutation and mutagenesis, quantitative genetics, family structure, population genetics, and evolutionary genetics.

Language(s) of Instruction

English
