Course Description

At the end of the course students understand and apply the main financial principles and concepts: they understand why and how financial intermediation exists, how the basics of mathematical finance should be applied in the evaluation of financing contracts and financial instruments; how to invest in a portfolio, taking into account both expected returns and risks; and how the monetary policy is related to what they learn in this course, and how to interpret the current issues on financial markets. The course addresses the following topics: principles of finance, financial equivalence, banking services, mortgage evaluations and amortization, principles of valuation, basic financial instruments and their pricings, uncertainty and risk measures, risk and return relation in financial markets, capital asset pricing model, and investment portfolios and performances.
