**Course Description**
This course deals with the basic principles of health and environment and their application in specific cases of risk evaluation and assessment. More specifically, the course addresses the following topics: human exposure to chemical, physical and biological agents, and pollutants (e.g. air, water, food); risk assessment of environmental exposures; interaction with the human body, how may the human body respond and cope with these environmental exposures. There are no specific prerequisites for this course but a background in biology, chemistry, or ecotoxicology is recommended.
