UCEAP Quarter Units

6.00

UCEAP Semester Units

4.00

Course Description

This course examines interactions of individual plants and plant communities with their abiotic environment, including ground and surface water regimes and biogeochemistry at the local scale. It looks at how these interactions are linked to hydrological processes at the catchment scale and how these interactions can be applied to conserve or restore water-dependent vegetation and habitats at the local level.

Language(s) of Instruction

English
