3.00

## Course Description

This course covers the recent developments in experimental and behavioral economics as well as their extension into neuroeconomics. It demonstrates how developments in cognitive psychology and neural exploration in the subjective representations of the stakeholders have enriched the discipline at the microeconomic and macroeconomic levels. The course investigates several iterations of this young sector which is being shaped by a never-before-seen cooperation between the hard sciences and the social sciences by showcasing several applications: monetary incentivization, entrepreneurship behavior and attention control, behavioral finances, risk attitudes, the rules of cooperation, the role of knowledge and belief in decision making, the mechanisms of coordination, et cetera.
