Course Description

The course presents the fundamental notions of the biological dimension of human beings, with a particular emphasis being given to biological systems primarily related to the maintenance of higher cognitive functions. It addresses the basic concepts of physiology and anatomy of the human nervous system as well as the physiology of other biological systems committed to emotional functioning. The course also discusses the scope and limitations of the disciplinary dialogue between biology and psychology. Topics covered include: general principles of human biology and physiology relevant to biopsychology; introduction to neurobiology; models of functional organization of the nervous system and behavior; other physiological systems relevant to human behavior; practical analysis of psychological processes from the perspective of integral biology.
