Course Description

This course introduces students to the politics and controversies of environmental issues in France and their inter-connections with food and similar politics at the EU and UN levels. The course explores pressing environmental issues facing the country such as GMO politics, food wastage, air pollution, water pollution, species extinction, environmental justice, trade, climate change, and the impact of chemicals on health. The course assesses the nature of problems encountered, and discusses workable solutions for sustainable development in order to avoid a “tragedy of the commons.”
