149

### **UCEAP Course Suffix**

# **UCEAP Official Title**

SCIENCE OF MEMORY

# **UCEAP Transcript Title**

**SCIENCE OF MEMORY** 

### **UCEAP Quarter Units**

6.00

### **UCEAP Semester Units**

4.00

### **Course Description**

Learning from and remembering experiences is critical for survival; failure of the psychobiological mechanisms underlying memory formation and retrieval can have severe and life-changing effects. In this course, students gain knowledge of the neural basis of learning and memory and develop an understanding of how learning and memory are impacted by, or are a feature of, various mental health conditions. Lectures may include the following topics: types of learning and memory; memory formation, persistence, and modulation; memory-related disorders, and corresponding pre-clinical models.
