149

**UCEAP Course Suffix****UCEAP Official Title**

SCIENCE OF MEMORY

**UCEAP Transcript Title**

SCIENCE OF MEMORY

**UCEAP Quarter Units**

6.00

**UCEAP Semester Units**

4.00

## Course Description

Learning from and remembering experiences is critical for survival; failure of the psychobiological mechanisms underlying memory formation and retrieval can have severe and life-changing effects. In this course, students gain knowledge of the neural basis of learning and memory and develop an understanding of how learning and memory are impacted by, or are a feature of, various mental health conditions. Lectures may include the following topics: types of learning and memory; memory formation, persistence, and modulation; memory-related disorders, and corresponding pre-clinical models.

### Language(s) of Instruction

English

### Host Institution Course Number

C8853

### Host Institution Course Title

SCIENCE OF MEMORY
