Course Description

This course is for learning theoretical foundations of behavioral economics. In behavioral economics, researchers test assumptions of one's behavior through surveys and experiments, thus leading to new theories for economic behavior. These research methods and theories will be useful for understanding international differences in economic behavior and outcome such as economic growth and income distributions. This course mainly focuses on behavioral economic research on time preferences and attitudes toward risk.

Course enrollees are also encouraged to register for the course, *International Economy and Behavioral Economics B*, at the same time or after completing this course.
