UCEAP Semester Units

4.00

Course Description

This course explores quantitative methods for historians with applications in different historical fields. The first half of the course covers methods of constructing and displaying historical data, providing and interpreting summary statistics, and exploring the relationship between different historical variables. The second half focuses on applications of some of these methods in economic history, financial history, spatial history, and international history. Each case is discussed with reference to quantification and data analysis methodology of a published work drawn from early modern and modern periods. Students are expected to complete tasks in Microsoft Excel.
