UCEAP Semester Units

2.70

Course Description

This course offers an introduction to equilibrium thermodynamics. The course covers the First and Second Laws of thermodynamics, along with the concepts of temperature, internal energy, heat, entropy, and the thermodynamic potentials. The course also considers the applications of thermodynamic concepts to topics such as heat engines, the expansion of gases, and changes of phase. The Third Law, and associated properties of entropy, completes the course.

Language(s) of Instruction
