Course Description

Learn concepts of culture, social norms and how to research them, generalizability, and cross-cultural relevance. Seminars provide an opportunity to explore concrete examples for how lives and development of youth can differ across cultures (e.g., initiation rituals, friendship, love and/or marriage, loneliness, social media, work, living arrangements, mental and physical health, beliefs about “emerging adulthood”, ...). Additionally, apply knowledge from lectures by analyzing generalizability and cross-cultural relevance of research articles about youth and their development, reflect on how your own culture can influence how you conduct and interpret research, and develop concrete suggestions for more culture-sensitive research. This course provides an opportunity to focus on topics you are particularly interested in.
