THE CHINESE ECONOMY: GROWTH AND UNCERTAINTY

**UCEAP Transcript Title**

CHINESE ECONOMY

**UCEAP Quarter Units**

4.50

**UCEAP Semester Units**

3.00

## Course Description

This seminar presents the Chinese economy and its last three decades of evolution from a macroeconomic perspective. The second biggest economy in the world has three specific characteristics of being opaque, not studied often, and offering a rare example of a fast growing non-fully economically liberal capitalist system. Beyond its purely empirical importance as second biggest GDP and largest world growth engine over the past decade, the Chinese economy, through its extraordinary rise, has challenged economics knowledge and the whole international economics order. At the time the Chinese economic model becomes both more assertive and more contested, a better understanding of it appears essential to a comprehensive understanding of today's world, and even more so for tomorrow's.
