UCEAP Quarter Units 6.00
UCEAP Semester Units 4.00

Course Description

This course introduces the general method and use of cost-benefit analysis with a particular emphasis on applications to resource and environmental economics. The course therefore deals with many crucial aspects of environmental cost-benefit analysis to provide the necessary background to assess the validity of practical environmental cost-benefit analyses, as well as to formulate how current guidelines can be improved based on the latest economic research. The course consists of a lecture block that provides an overview and introduces students to key concepts. Assessment is based on a presentation and written assignment on a topic of the student's choosing.
