# **COURSE DETAIL**

## **MOLECULAR GENETICS**

## **Country**

United Kingdom - England

#### **Host Institution**

University of London, Queen Mary

## Program(s)

University of London, Queen Mary

### **UCEAP Course Level**

**Upper Division** 

## **UCEAP Subject Area(s)**

**Biological Sciences** 

### **UCEAP Course Number**

115

## **UCEAP Course Suffix**

#### **UCEAP Official Title**

**MOLECULAR GENETICS** 

## **UCEAP Transcript Title**

**MOLECULAR GENETICS** 

## **UCEAP Quarter Units**

6.00

#### **UCEAP Semester Units**

4.00

### **Course Description**

This course explores genetics, a description of the process by which genetic information is converted into the molecules that make up living things, and reviews the essential properties of those molecules. Genetics topics covered include DNA structure, classical and molecular genetics, and genomics. The course also examines how information flows from DNA to RNA and then to protein to give the recognizable phenotypic features of living things.

## Language(s) of Instruction

English

### **Host Institution Course Number**

BIO163

#### **Host Institution Course Title**

**MOLECULAR GENETICS**
