3.70

Course Description
This course provides an introduction to human cognition and behavior, addressing foundational topics in psychological science. Foundational topics include key concepts such as evolution, genetics, neuroscience, and culture, and specific topics, such as perception, memory, cognition, decision-making, child development, psychopathology, personality, intelligence, emotion, attraction, cross-cultural differences, prejudice, norms, attitudes, social learning, social influence, and group processes. The course offers an integrated perspective on these topics, investigating the evolution and variation in human psychology over time, across cultures, and over the lifespan. The course introduces the history of the study of humans and human psychology, offering students the historical context to trends in research.

Language(s) of Instruction
