UCEAP Course Suffix
UCEAP Official Title GLOBAL ENVIRONMENTAL GOVERNANCE
UCEAP Transcript Title GLOBAL ENV GOVRNCE
UCEAP Quarter Units 6.00
UCEAP Semester Units 4.00

Course Description

This interdisciplinary course takes concepts, approaches, and theories from political science, international law, and human geography. It draws mainly on examples from climate change and tropical forestry, but also from other environmental areas. The course consists of six modules: introduction to the general field of global environmental governance; the emergence of ideas and ideologies about global environmental problems and their solutions; global environmental governance actors, architecture, and international relations (perspectives mainly from political science and human geography); state-led global regulation, institutions, and regimes (perspectives mainly from international law); global economic governance, the market, and the environment; the role of non-state actors in global environmental governance. The course includes one or more excursions to national or international organizations located in Copenhagen and knowledgeable about, relevant to, and active in global environmental governance.
