**UCEAP Semester Units**

3.00

## Course Description

This course provides a study on urban risks. With a focus on resiliency planning, the course emphasizes analytical practices to evaluate risks related to natural phenomena (inclusive of earthquakes, storms, volcano eruptions, and other various phenomena) and human activities that create risks (for example, construction in vulnerable zones and threats due to climate change). It also analyzes risk reduction and management solutions that planners can utilize to mitigate against natural disasters and changing climates and conditions. Course materials and resources include case studies as well as professional guest speakers working in both public and private planning agencies in Mexico.

## Language(s) of Instruction

Spanish

## Host Institution Course Number

748

## Host Institution Course Title
