**UCEAP Quarter Units**

6.00

**UCEAP Semester Units**

4.00

## Course Description

This course examines major themes in the study of global environmental politics (GEP). In the first half of the course, students examine theories and concepts underlying environmental policy, while being introduced to the different stakeholders and institutions that form global environmental governance. Students learn about the perspectives on why environmental problems arise, and how and under what conditions they can be solved. They then explore processes of international environmental governance: problem identification/policy formulation, designing and negotiating multilateral environmental regimes, and implementing and enforcing international environmental law and policy. In the second half of the course, students use these concepts and apply them to specific themes, such as security, climate justice, and economic growth and development. Each week the subject is complemented with case studies that demonstrate the importance and realities of the different issues facing global environmental politics.

## Language(s) of Instruction

English
