3.00

Course Description

The course introduces the research approaches used in both human and physical environment areas. Students are introduced to basic types of research and are equipped to use research in planning, implementing, and evaluating programs and projects. The course covers the initial stages of thinking theoretically about a research project, which covers both the human and physical environment approaches that are pertinent to environmental studies. The course covers the basic knowledge of research as a scientific tool used to study social phenomena. Students are expected to have an understanding of basic principles of data collection, both quantitative & qualitative, and simple methods of data analysis as well as the importance of research design.
