EUR PUBLIC HEALTH

UCEAP Quarter Units
8.50

UCEAP Semester Units
5.70

Course Description

This version of the European Public Health in a Globalizing World course includes an Independent Study Project (ISP) done under the direction of the instructor. The ISP is 10-12 pages and counts for 1/3 of the overall grade for the course. The course provides an overview of modern health challenges in Europe and how they are shaped by a variety of themes within stakeholders in policy, research, and practice. Such themes include developing a unified system of population health monitoring across sovereign countries; coping with population aging and rising healthcare expenditures; managing commercial and social determinants of health; supporting cross-border collaboration between national health systems; fostering learning and the exchange of expertise in social and health policy; and identifying a global role for European Public Health. The current course combines theory with practice through lectures, tutorials, and a masterclass. Lectures introduce the content and initiate discussions on topics covered by the course. In addition, the course makes use of problem-based learning (PBL), a prominent learning method widely used at Maastricht University, in which students actively engage in their own learning. Finally, the course includes an exchange of views in the form of a masterclass with a senior expert in European health policy. To facilitate a fruitful learning environment a moderate level of health-related knowledge is required. Hence, the course is directed toward students attending bachelor or master's courses in medicine, public health science, sociology, anthropology, political science, or economics.
