UCEAP Transcript Title FINANCIAL ECON THRY
UCEAP Quarter Units 3.00
UCEAP Semester Units 2.00

Course Description
This course introduces the theory of financial economics and major topics of modern finance. The course assumes standard knowledge (Hiyoshi-level) of microeconomics, calculus and probability theory. The course consists of three parts. The first part is a refresher on the basic economic concepts used throughout the course, such as expected utility, choice under uncertainty, or competitive equilibrium. The second part covers standard portfolio-choice problems and equilibrium asset-pricing models such as CAPM or CCAPM. The third part studies the theory of incentives and/or asymmetric information and its applications to finance.
