UCEAP Semester Units
3.00

Course Description
This course introduces students to a number of case studies concerning past financial crises. It begins by discussing economic theories regarding the occurrence of crises. The course studies how the financial system functions and how it interacts with the broader economy. Students then learn what the principal actors of financial crisis management–central banks–do and how and their mandates evolved in response to crises. Among others, the course studies the Great Depression, Japan's Lost Decade, Zimbabwe's hyperinflation, the 2007-2009 subprime crisis, and the European sovereign debt crisis. This offers an opportunity to discuss issues regarding the regulation of the financial system and the welfare costs of financial crises.
