6.00

**UCEAP Semester Units**

4.00

## **Course Description**

This course describes and evaluates contemporary challenges faced by wildlife management professionals and conservation biologists. The course gives students an appreciation of different stakeholder perspectives in wildlife management and how rigorous scientific method can be used to inform wildlife management decisions. The course explores the techniques and methods for undertaking wildlife research, with an emphasis on terrestrial vertebrate species. Students gain experience in articulating and acknowledging various stakeholder views, and understanding the processes involved in formulating an evidence-based management approach to contentious wildlife management scenarios.
