6.00

UCEAP Semester Units

4.00

Course Description

This course explores the impact of human population growth on Earth's species and habitats, and the current approaches to conservation of biodiversity. It discusses the impacts of the earliest human migrations into previously uninhabited lands, to the current and future projected impacts of climate change on biodiversity. Topics include: the primary drivers of change in ecological systems; secondary processes and synergistic feedbacks this change creates; strategies and actions to raise awareness of humanity's dependence on biodiversity; goal for conservation and management of biodiversity in the 21st century.
