Course Description

The module focuses on attention and cognitive control, memory, language, social interaction, problem solving and thinking, and decision making. This module communicates knowledge about the neurocognitive basis of emotion and how cognitive function is influenced by emotion and introduces different types of brain damage and psychoorganic syndromes. Students participate in laboratory demonstrations to train important skills for conducting empirical studies in cognitive neuroscience, including reporting the results in accordance with the international norms for publication in psychology. This course is part of PSYCHOLOGY: COGNITIVE NEUROSCIENCE (30 ECTS).
