Course Description

The main focus of this course is on the interactions between people and their environment. It covers topics such as perception of environment, the origin of the earth, the evolution of the earth environment, and the earth as the home of human beings. Discussion about atmosphere, hydrosphere, biosphere, and geosphere are oriented to human history. They are considered either as natural resources or natural hazards. Historical events are used to illustrate how human history was affected by environment and how the environment affected historical events. Global change and sustainable development are the two main concepts that underlie such discussions. The course uses literature, art and archeological findings along with videos from Discovery and National Geographic Society.
