6.00

**UCEAP Semester Units**

4.00

**Course Description**

Game theory is the study of the interaction of rational decision makers. This theory has become a fundamental tool in the study of social interaction in economics, political science, management, sociology, computer science and other disciplines. This course is an introduction to game theory and strategic thinking. Ideas such as dominance, backward induction, Nash equilibrium, commitment, credibility, asymmetric information, adverse selection, and signaling are discussed and applied to examples drawn from economics, politics, and management.
