| **UCEAP Official Title**<br>MARINE BIOLOGY |
| **UCEAP Transcript Title**<br>MARINE BIOLOGY |
| **UCEAP Quarter Units**<br>13.00 |
| **UCEAP Semester Units**<br>8.70 |

**Course Description**

This course studies temperate and tropical marine systems and their associated organisms. The marine habitats include coral reefs, mangrove forests, and seagrass beds. The first marine biology field program takes place on North Stradbroke Island at the Moreton Bay Research Station and includes the exploration of the major marine environments that occur on the island. The second major field program is conducted at Heron Island Research Station on the Great Barrier Reef. Class-based activities are undertaken at the research station that introduce the geomorphology, terrestrial ecology, management, marine biology and ecology of coral reefs. Following this, students conduct group research projects and present results. Research reports are prepared to international journal manuscript standards.

**Language(s) of Instruction**
English
